

□ COMMUNICABLE DISEASES

School children work and play with many people. Communicable diseases spread easily in a school if health rules are not followed. How do schools try to keep down the spread of diseases? School sees to it that children are examined regularly by the school doctor and school dentist. Lessons on how to take care of one's health are taught. Children are served good food during recess time. They get fresh air and exercise during their physical education classes. They are given immunization against cholera, typhoid and dysentery.

QUESTIONS:

1. What is the story all about?
2. How do schools teach children about taking care of their health?
3. What do you mean by communicable diseases?
4. What will happen if school children obey all health rules?
